### Search Notes

Dear Examiner Fadok,

Attached are the search results (from commercial databases) for your case.

Tags mark the patent/articles, which might be of interest. After you review all records including tagged and untagged records, if you wish to order the complete text of any record, please submit request(s) directly to the STIC-EIC 3600 Email Box or hand carry the request to the front desk of the respective EIC.

Please call if you have any questions or suggestions. I have enclosed a Search Results Feedback Form to facilitate further comments or suggestions. Please take a few minutes to share with us your feedback.

Thanks

Virgil O. Tyler

Is this a "Fast & Focused" Search Request? (Circle One) YES NO

A "Fast & Focused" Search is completed in 2-3 hours (maximum). The search must be on a very specific topic and meet certain criteria. The criteria are posted in EIC3600 and on the EIC3600 NPL Web Page at <http://ptoweb/patents/stic/stic-tc3600.htm>.

What is the topic, novelty, motivation, utility, or other specific details defining the desired focus of this search? Please include the concepts, synonyms, keywords, acronyms, definitions, strategies, and anything else that helps to describe the topic. Please attach a copy of the abstract, background, brief summary, pertinent claims and any citations of relevant art you have found.

**IN THE CLAIMS:**

1-22. (Cancelled)

23. (Currently amended) A method in a first data processing system for generating a customized catalog, the method comprising:

presenting a plurality of items to a user located at a second data processing system;

placing an item from the ~~set~~ plurality of items in a ~~set~~ in response to a selection of the item by the user, *meta-shopping cart*

generating the customized catalog in response to a request indicating that that the set is complete, the customized catalog containing items that the user has placed in the set for possible future purchase by an entity represented by the user; *generated meta-shopping cart*

negotiating terms for purchasing items in the customized catalog;

establishing a protocol for purchasing items from the customized catalog; and

placing the customized catalog on a Web site.

24. (Previously presented) The method of claim 23 further comprising:

establishing operational items including at least one service level agreement for purchasing the items pursuant to the negotiated terms.

25-46. (Cancelled)

47. (Currently amended) A data processing system in a first data processing system for generating an customized catalog, the data processing system comprising:

presenting means for presenting a plurality of items to a user located at a second data processing system;

placing means for placing an item from the ~~set~~ plurality of items in a set in response to a selection of the item by the user;

generating means for generating the customized catalog in response to a request indicating that that the set is complete, the customized catalog containing items that the user has placed in the set for possible future purchase by an entity represented by the user;

Abstract (Basic): US 20020138370 A1

NOVELTY - The items selected by an user by meta-shopping, are included in a meta-shopping list (410). A customized catalog (414) is generated using items in the list in response to a request to generate the customized catalog for placing on a web site.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Data processing system; and
- (2) Computer program product in computer readable medium comprising instructions for catalog establishment.

USE - For establishing customized catalog for e-commerce.

ADVANTAGE - Enables preparing requested catalog from a list including user selected items within short time period and with less manpower.

DESCRIPTION OF DRAWING(S) - The figure shows the components used in web server.

Abstract (Basic): US 20050108024 A1

NOVELTY - The information in the form of electronic message, financial report or web page, associated with secondary topic such as company or industry, is requested. The information associated with the primary and secondary topics, are received in response to requested information and legal relationship between the topics.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) system for presenting information; and
- (2) distributed system for storing and retrieving information.

USE - For providing information related to company, industry, index or subject.

ADVANTAGE - Enables easy capture, storage, retrieval and distribution of information in various forms, without an analyst having to remember or determine all companies, industries or entities to which the information pertains.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the information provision system.

Abstract (Basic): US 20040010462 A1

NOVELTY - The method involves obtaining actual account numbers of source accounts e.g. credit cards (111) to be consolidated. Each actual number is assigned to a proxy account number. A proxy account number is received based on a request to perform a transaction with a selected consolidated account. The transaction is settled when the received proxy number matches with actual number of consolidated account.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a system for providing access to accounts.

USE - Used for consolidating source accounts in bank.

ADVANTAGE - The method provides a consumer to access and modify the source accounts and manages the funds across the source accounts by accessing the consolidated platform.

DESCRIPTION OF DRAWING(S) - The drawing shows a system and method for consolidating source accounts.

Credit card (111)

Consolidated platform (130)

Touchtone terminal (140)

Point-of-access terminal (151)

Abstract (Basic): US 20030229503 A1

NOVELTY - A request comprising several actions with defined relationships between the actions, is received. A response for the actions processed according to the defined relationships, is generated.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) computer program product for data processing;
- (2) request processing system; and
- (3) memory for storing data for access by application program.

USE - For electronic-commerce business applications such as purchasing of air tickets and reservation of hotel rooms.

ADVANTAGE - Avoids the user having to wait to receive a response for a corresponding request, before sending another request or choosing a course of action.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram illustrating composite business-to-business interaction.

US 20030115149 A1 23 G06F-017/60

Abstract (Basic): US 20030115149 A1

NOVELTY - The method involves constructing an electronic service contract between two primary parties with a service provider and a service customer (1105). The service contract has specifications for configuration by primary parties and by a sponsored party. The electronic service contract is deployed to one of the parties to configure a service in accordance with the specifications in the electronic service contract.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for an apparatus used in an electronic business service environment.

USE - Used in an electronic business service environment.

ADVANTAGE - The method provides enhanced performance of electronic contract based service applications across multiple business entities, thereby work in the area of service management does not fail to take the business impacts of service level agreements (SLAS) into account.

DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram of an electronic commerce system and the roles of involved parties.

Abstract (Basic): WO 200348986 A2

NOVELTY - An environmental score for a separately accountable business is calculated without making assumptions regarding environmental sustainability. An accounting method is used to generate a score taking into consideration the full costs of the economic activity for the business unit.

DETAILED DESCRIPTION - The method involves calculating a score for a unit of economic activity for which amounts may be determined separately. The accounts for the unit indicate recognized or internal costs. The score for the unit is calculated by taking into consideration the full costs of the economic activity for the unit by adding external environmental costs to the internal costs. INDEPENDENT CLAIMS are included for; a method for calculating a score for a separately accountable business unit, in which the score indicates a level of unaccounted for external environmental cost of economic activities of the business unit; a method for managing a separately accountable business unit; a processing system for calculating a score for a separately accountable business unit, in which score indicates level of unaccounted for external environmental cost of economic activities of business unit.

USE - Calculating a score for a separately accountable business unit, in which the score indicates external costs for the business unit

ADVANTAGE - Simply requires financial information from companies in order to enable the calculation of an environmental score.

DESCRIPTION OF DRAWING(S) - The drawing shows a schematic diagram of the processing system of the invention.

Abstract (Basic): US 20020178103 A1

NOVELTY - A negotiation meta contract is used to specify a negotiation protocol which is to be followed by the negotiating companies. An automatic negotiation is conducted between one or more applications of each of the several companies, according to the negotiation meta contract in response to a request.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

(1) computer program product for conducting negotiation of electronic service contract; and

(2) article of manufacturer comprising machine readable medium storing electronic service contract negotiation program.

USE - For automated dynamic negotiation of electronic service contract e.g. business-to-business electronic commerce contracts and agreements.

ADVANTAGE - Enables automated and dynamic negotiation of the terms of a contract through internet. Provides an automated negotiation process between several companies in which the contract negotiation process is delegated to a third company.

DESCRIPTION OF DRAWING(S) - The figure shows the schematic diagram of the general architecture of an electronic service contract negotiation system.

Abstract (Basic): US 20020174034 A1

NOVELTY - A set of primary computing nodes notify a catalog of products to a set of secondary computing nodes associated with different geographic locations. Orders from secondary nodes are received and processed by a server. The catalog is updated accordingly and notified to the secondary nodes.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Commercial transaction processing system;
- (2) Data processing system; and
- (3) Computer program product for implementing commercial transaction processing program.

USE - In distributed web commerce system.

ADVANTAGE - Allows routing or moving of transactions to different portions of the network to reduce off-load processing.

DESCRIPTION OF DRAWING(S) - The figure shows a pictorial representation of the network of data processing system.

Abstract (Basic): US 20020152105 A1

NOVELTY - An initial schedule of the time-based event driven process is altered based on received status update information to generate a new schedule. The new schedule is modified based on historical information which includes information about events that conflict with the events in the schedule, to generate a modified schedule.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Time-based event driven process scheduling apparatus; and
- (2) Computer program product for implementing time-based event driven process scheduling method.

USE - For actively scheduling time-based event driven process in data processing system including personal digital assistant (PDA), notebook computer, hand-held computer, etc., also for scheduling vehicle maintenance, baby immunizations, doctor visits, etc.

ADVANTAGE - Enables scheduling time-based event driven process effectively.

DESCRIPTION OF DRAWING(S) - The figure explains an initial vehicle maintenance schedule.

Abstract (Basic): US 20020065751 A1

NOVELTY - A list of matters to be reviewed by a particular reviewer are generated, based on time, bill and account information collected for specific services rendered to specific clients in a predetermined time period. An automated review form corresponding to the list is provided to the reviewer through computer network. The reviewers responses are collected and processed to produce review reports.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Automated review system for professional service firm; and
- (2) Professional service firm personnel management system.

USE - For automatically reviewing services provided by a professional service firm e.g. accounting firm, engineering firm, law firm, architectural firm, etc.

ADVANTAGE - Enables reviewers to provide a detailed and specific review of the employees working under the supervision and thus ensures improved effectiveness of firm tasks, feedback, growth and/or management.

DESCRIPTION OF DRAWING(S) - The figure shows a process flow diagram of the automated reviewing process.

Abstract (Basic): GB 2326802 A

The method involves communicating between a client (103) and one of the servers (101) in the group (104) using a protocol that has no limited or defined procedures for passing state information. A request for an action requiring participation by a number of servers is transmitted from the client to one of the servers.

In response to the request, the servers communicate with one

another with a controller server (102) coordinating the actions of the other servers in the group.

USE - Virtual shopping.

ADVANTAGE - Coordinates multiple independent servers across multiple web sites.

#### ABSTRACT

PROBLEM TO BE SOLVED: To regulate one authentication for a client among store sets to execute transaction in an optional store or an optional sub-session of the store.

SOLUTION: This method for including an entry server and a controller server, and for coordinating actions among servers of a server group under a client/server environment having the server group in which the each entry server is communicated with the control server includes the following steps 1, 2 and 3. In the step 1, the communication is carried out using a protocol limited in a procedure for transferring condition information between the client and the server among the servers of the client and server groups, or an undefined protocol. In the step 2, an operation request is transferred from the client to one of the servers. In the step 3, the communication with the control server is carried out among the plurality of servers in response to the request to coordinating the actions for at least some of the servers.

## English Abstract

The present invention relates particularly to a method and system for consolidating a plurality of a consumer's payment and non-payment source accounts into a consolidated platform with a customer identification or available proxy account numbers that can be assigned to source accounts. The source accounts can be, for example, credit card accounts (112), ATM accounts (112), debit card accounts (112), demand deposit accounts, stored value accounts (113), merchant-loyalty card accounts, membership accounts (115), and identification card numbers. The consumer can access and modify any of the source accounts and manage funds across the source accounts by accessing the consolidated platform with a single access device or mode.

## French Abstract

La presente invention concerne en particulier un procede et un systeme permettant de consolider une pluralite de comptes sources de paiement et de non paiement de consommateurs dans une plate-forme consolidee avec des numeros de compte a identification ou procuration disponibles de clients pouvant etre affectes a des comptes sources. Les comptes sources peuvent etre, par exemple, des comptes a cartes de credit, des comptes GAB, des comptes a cartes de retrait, des comptes de depot a vue, des comptes a valeur enregistree, des comptes a cartes de fidelisation aupres de commercants, des comptes a affiliation, et des numeros de cartes d'identification. Le consommateur peut acceder a et modifier n'importe lequel des comptes sources et gerer des fonds sur les comptes sources par acces a la plate-forme consolidee a l'aide d'un seul dispositif ou mode d'accès.

**Abstract:** With the growth of the Internet, business-to-business procurement and other processes are being moved to the World Wide Web, for increased efficiency and reach. Procurement systems from different vendors use various protocols, and additional protocols are being defined by several industry consortia. As a consequence, suppliers are faced with the difficult task of supporting a large number of protocols in order to interoperate with various procurement systems and private marketplaces. We outline the connectivity requirements for suppliers and private marketplaces, and we describe how suppliers and marketplaces based on IBM's WebSphere(R) Commerce Business Edition and WebSphere Commerce Suite, Marketplace Edition can interoperate with diverse procurement systems and **electronic marketplaces**. We first describe simple connectivity based on punchout processes for fixed and contract-based pricing. We then describe how asynchronous processes, such as requests for quote, auctions, and exchanges can be distributed for interoperability. Finally, we describe B2B/M2M Protocol Exchange, a prototype we have implemented that maps between different, but analogous, protocols used in procurement systems, and thus alleviates some of the interoperability difficulties. **Abstract:** In business-to-business interactions spanning **electronic commerce**, supply chain management, and other applications, the terms and conditions describing the electronic interactions between businesses can be expressed as an electronic contract or trading partner agreement (TPA). From the TPA, configuration information and code that embody the terms and conditions can be generated automatically at each trading partner's site. The TPA expresses the rules of interaction between the parties to the TPA while maintaining complete independence of the internal processes at each party from the other parties. It represents a long-running conversation that comprises a single unit of business. The paper summarizes the needs of interbusiness electronic interactions. Then it describes the basic principles of electronic TPAs, followed by an overview of the proposed TPA language. The business-to-business protocol framework (BPF) provides various tools and run-time services for supporting TPA based interaction and integration with business applications. Finally, we describe examples of solutions constructed using TPAs and BPF. (19 Refs)

Treatment: Practical (P)

Abstract: The Internet provides the opportunity for quickly setting up deals between businesses for promoting each other's products, and to jointly offer new services. Specification and enforcement of such deals stretch traditional transaction processing concepts in several directions since they involve independent businesses with their own internal processes. First, the greater variability in response time in business to business interaction creates a need for asynchronous and event driven processing, in which correct handling of reissued and cancelled requests is critical. Second, a new transaction processing paradigm is required that supports different views of a unit of business for all participants, i.e., service providers as well as end consumers. Between any two interacting parties, there may be several related interactions dispersed in time, creating a long running conversation. The paper describes our approach (Coyote) to solving these problems including use of a service contract for specifying the rules of interaction across businesses, and directly generating code for enforcement of the contract. We finally describe the architecture and a prototype of a system which implements the Coyote concepts. (18 Refs)

Abstract: Supporting high transaction rates and high availability for **on - line transaction** processing and emerging applications requires systems consisting of multiple competing nodes. We outline various cluster architectures and describe the factors that motivate the S/390/sup R/ Parallel Sysplex/sup TM/ architecture and its resulting advantages. We quantify the scalability of the S/390 Parallel Sysplex and show that the transaction rate supported is close to linear as nodes are added to the system. The key facet of the S/390 Parallel Sysplex architecture is the coupling facility. The coupling facility provides for very efficient intertransaction concurrency control, buffer cache coherency control, and shared buffer management, among other functions, that lead to the excellent

scalability achieved. It also provides for effective dynamic load balancing, high data buffer hit ratios, and load balancing after a failure.

**Performance analysis of concurrency control using locking deferred blocking**

Yu, Philip S; **Dias, Daniel M**

IEEE Transactions on Software Engineering v. 19 (Oct. '93) p. 982-96

DOCUMENT TYPE: Feature Article ISSN: 0098-5589 LANGUAGE: English

RECORD STATUS: Corrected or revised record

ABSTRACT: A new concurrency control (CC) method that uses locking with deferred blocking is presented. Conventional locking in CC systems suffers from the blocking phenomenon, by which waiting transactions in a processing system continue to hold locks and block other transactions from progressing. The proposed model reduces the blocking probability by deferring the blocking behavior of transactions to the later stages of their execution. Static and dynamic approaches are evaluated for determining when to switch from the nonblocking to the blocking phase. By correctly balancing the blocking effect and the abort effect, which can be caused by accessing data during the nonblocking phase, the new CC method can result in a better performance than either the conventional locking or the optimistic CC schemes at all data and resource contention levels. An analytical model, which predicts the performance of this scheme and measures the optimal operating or switching point, has been developed and validated. .

**ABSTRACT:** An approximate analysis methodology is developed to model the effect on system performance of data contention under differing Concurrency Control (CC) schemes and for differing system structures. With demand for increases in transaction throughput, CC can have a crucial effect on the performance of transaction processing systems. The proposed methodology is employed to investigate the performance of centralized transaction processing systems using a variety of optimistic- and pessimistic-type CC schemes for both fixed-length and variable-length transactions. A comparison is made with simulations to illustrate the accuracy of the method. The analysis method can be used to investigate the performance of distributed transaction-processing systems with replicated data. .

RECORD STATUS: Corrected or revised record

**ABSTRACT:** An analytical modeling framework for analyzing the recovery times under deferred dirty page propagation policies is described. Detailed simulations were used to validate the analytic modeling framework. It was shown that the model provides a framework to understand the factors affecting the recovery time and that the analysis gives insights on the trade-offs between recovery time and I/O saving during normal operations. In addition, it offers a means for system administrators to select the appropriate operating parameters such as clipping count and buffer size to satisfy the recovery and performance requirements.

ABSTRACT: The resilience of the performance to system dynamics of 3 architectures for transaction processing are compared. The 3 architectures are the Shared Nothing architecture, the Shared Disk architecture, and the Shared Intermediate Memory architecture. The scenarios considered are a sudden surge in load of one transaction class, varying transaction rates for all transaction classes, and failure of a single processing node. It is found that the various architectures need different amounts of capacity to be reserved to cope with these dynamic situations. It is demonstrated that the data sharing architectures are more resilient to system dynamics and need far less contingency capacity than the Shared Nothing architecture.

ABSTRACT: A hybrid distributed centralized system structure for transaction processing is examined that consists of distributed systems to take

advantage of locality of reference and a central system to handle transactions that access nonlocal data. It is noted that several transaction-processing applications, such as reservation systems, insurance, and banking, have such regional locality of reference. The concurrency and coherency control protocol that is described maintains the integrity of the data and has good performance for transactions that access local or nonlocal data. The performance of the hybrid system is shown to be much less sensitive to the fraction of remote accesses than the distributed system and offers similar performance to the distributed system for local transactions.

RECORD TYPE: ABSTRACT

ABSTRACT: A new scheme of concurrency control using locking with deferred blocking is discussed. The scheme adopts features from both conventional locking and optimistic concurrency control schemes. It limits the blocking probability during transaction processing by deferring blocking behavior to the later part of transaction execution. The transaction execution can then be segmented into a nonblocking phase and a blocking phase, which can be switched by either static or dynamic control. The scheme also limits the abort probability by allowing aborts to proceed only during the initial stages of transaction execution. An analytical model for determining the optimal operating or switching point of the scheme and measuring its performance is also discussed.

RECORD TYPE: ABSTRACT

ABSTRACT: Design aspects related to the concurrency-coherency control protocols of a hybrid distributed-centralized database system are investigated. The study considers architectures where regional locality of data access is important but which replicates data in the distributed

databases only at the central site. Such a system provides more benefits in terms of access time and from a design perspective of the protocols for concurrency and coherency control of the duplicate databases. A system performance simulation shows that the best protocols are those which facilitates an optimistic intersite concurrency control where the master database is at the distributed site. This balances process aborts between transactions being performed at the central office and the distributed site.

RECORD TYPE: ABSTRACT

ABSTRACT: Analytic models for analyzing different enhancements to the pure optimistic concurrency control (OCC) scheme are developed to use the buffer-retention effect, in which a rerun transaction behaves differently from its first run. This allows different concurrency control schemes to be used for rerun transactions to enhance overall system performance in a high data contention environment. Three different hybrid concurrency control schemes are studied: the static and dynamic hybrid OCC schemes, which switch from OCC to static and dynamic locking after the first abort, respectively, and the OCC with broadcast during rerun, in which a committing transaction detects conflicts with other transactions but only aborts the conflicting rerun transactions in the middle of their executions. The analysis is validated with simulations and performance comparisons of the different schemes.

RECORD TYPE: ABSTRACT

**ABSTRACT:** A hybrid distributed centralized computer system structure for transaction processing is examined. The hybrid structure combines the best of both a centralized and distributed system. The centralized system processes transactions that access non-local data and the distributed system takes advantage of locality of reference, such as found in reservation systems, banking and insurance. The control protocol of such a system is critical to the success of its performance. The protocol enables transactions that access only local data at a local system to run at a distributed system site, without communications to the central site. The hybrid system performs better than a purely distributed processing system that requires larger MIPS as the number of remote data accesses increases.

**RECORD TYPE:** ABSTRACT

**ABSTRACT:** Coupled computer systems have direct access to all data stored on disk in a multisystem data sharing complex, requiring global concurrency control to manage simultaneous multisystem data access and coherency control to prevent access to obsolete data in private buffers. An integrated control system for concurrency and coherency is proposed and the resulting performance gain analyzed. A shared intermediate memory for buffering and early commit processing is examined as an extension to the data sharing system structure. The integrated concurrency protocol is shown to be able to overcome problems of read-write synchronization and write serialization. The performance improvement is quantified through use of a queueing model. The combination of an integrated concurrency-coherency control protocol with intermediate memory buffering is shown to yield more substantial performance gains than intermediate buffering alone.

RECORD TYPE: ABSTRACT

ABSTRACT: A methodology is developed to determine the number of processors required to satisfy transaction processing throughput and response time needs for processors of different MIPS, or sizes. An approximate analytical model driven by measured workload parameters is used to determine the minimum MIPS per processor necessary to satisfy response time and throughput constraints in a transaction processing complex of N coupled systems. It is found that very small systems may not match the cost-performance of some large systems when the same throughput and response time constraint criteria are applied. The cost criterion used indicates that an optimum processor size exists below which total system costs increase appreciably. Methods of reducing inter-system interference and coupling protocol overheads are examined and shown to decrease the optimum processor size.

RECORD TYPE: ABSTRACT

ABSTRACT: Growth in the use of multiprocessor-based database systems results from the demand for higher transaction rates. In a locally distributed system, coupling through multi-system data sharing may be used to increase system access to data. A hierarchical modeling technique is used to develop parameters for event-driven simulation models. Performance results are derived from these simulation models. The critical factor in determining coupling effectiveness is lock contention, and alternative lock designs which affect lock contention are available. Approximately six to 12 systems may be coupled effectively through data sharing, depending on lock design and system structure.

**Web portfolio based electronic commerce: the case of transtec AG**

Loebbecke, Claudia; Schafer, Stefan

Logistics Information Management v14n1/2 PP: 54-67 2001

ISSN: 0957-6053 JRNL CODE: LIM

WORD COUNT: 6452

...ABSTRACT: and business processes. Having started with a general corporate information system and a comprehensive electronic **product catalogue**, transtec's Web presence evolved to become one of the best performing online order-systems...

...TEXT: the World Wide Web (WWW). Having started with general corporate information and a comprehensive electronic **product catalogue**, transtec's Web presence evolved to become one of the best performing online order systems...to further develop its business processes. For instance, when transtec first edited its paper-based **product catalogue** [9], it tried to use an electronic typewriter. Employees had developed a program that accessed the internal databases for **catalogue**, **product** and control information and that sent this information to the typewriter. Then, the printed pages...started in 1995 with a pure information server providing general corporate information and an electronic **product catalogue**, transtec has continuously extended its Web services. For example, it added an order "tracking and...and layout. Besides general corporate and support information, all Web sites integrate the same electronic **product catalogue**, which covers more than 6,000 products that can be ordered from transtec. All products...

...a special price offer or additional information. They may add the selected product to an **electronic shopping - basket** and place an order.

Another interesting feature of transtec's Web site is a camera placed in...  
...select components that will result in a running system. The individually configured system can be **added** to the **electronic shopping - basket** and the customer can request an offer or order the system.

Technical support

transtec intends...use the Web to check the status of their order.

Customised Web pages

If customers **negotiate** special **conditions** for purchase and delivery with transtec, the Web pages can be customised. After checking an individual username and password with the internal database, the system delivers an electronic **product catalogue** that displays prices according to predefined conditions, available in transtec's merchandise management system[14...

... and national vendor catalogs."

"We liked Requisite Technology's approach of having an electronic, universal **catalog** of non-**production** goods tied to the suppliers that sell them," Bev Mackey, vice president of procurement service...

...identified several strategic business opportunities for its universal catalog, the first offering will provide a **customizable** universal **catalog** for corporate-wide purchasing of products and services from the desktop -- primarily operating resources and...

...order products from approved suppliers.

Web browser interface allows self-service access to Requisite's **customized** universal **catalog** via a corporate intranet. Users find products by selecting product attributes from valid alternatives rather...

...standardized electronic commerce solutions that desktop users will prefer over other buying methods.

"Our first **cataloging product** will help purchasing departments reduce off- contract buying, reduce the amount of time they spend...

...S ELECTRONIC UNIVERSAL CATALOG -- A CLOSER LOOK

The new Requisite catalog subscription service provides managed, **customized** purchasing **catalogs** that cover many strategic suppliers across many **product** categories -- called universal **catalogs**. **Product** descriptions and supplier information, including **negotiated prices**, are kept up-to-date as part of the Requisite service. This eliminates the need ...

...own universal catalogs or rely on purchasing software vendors to maintain universal catalog content.

Requisite **cataloging** experts define **product** -specific, parametric structures and then break product descriptions, found in the channel, into product attributes...

...Jerde says.

Once products are found, associated supplier information is available, including contracted pricing, for **filling** an **electronic shopping cart**. This **shopping cart** can be sent to the purchasing department, sent to suppliers or sent to any electronic...

TEXT:

... is established, the look of the particular site is customized with appropriate logos and a **custom catalog** of specific devices or specially configured systems for the account, including contract- **negotiated prices**

A case in point is a proprietary intranet site established for the Animal & Plant Health...

...another Web vendor that uses private intranet connections for major accounts, offering preconfigured bundles at **negotiated prices**. Combined with consumer purchases on its public Web catalog, the online "Dell Store" generates \$1...largest electronic connector manufacturer at <http://www.connect.amp.com>, and you'll find a **product catalog** with some 90,000 components.

Difficult if not impossible to navigate in paper format, the...

...virtue of his registration at the site, an HP engineer, for instance, will get a **customized catalog** of standard HP parts identified in the HP format," says Kessler. "As our relationship with...

...more consultative. "In the past the salesmen have spent a lot of time analyzing the **catalog** with the **customer** to help select the right product," says Kessler. "With the search engine we have stripped...

...at <http://www.millipore.com>. Once into the Millipore site, users can create their own **product catalog** on the fly, based on their particular area of interest. After a **custom catalog** is established, the system continually tracks the user's click prints, and automatically updates selected...[www.rockport.com](http://www.rockport.com). After a visitor describes his work, leisure, and recreational preferences, the site **generates a customized catalog** of shoe recommendations to complement that lifestyle and indicates the nearest retailer.

GLOBAL MANAGEMENT

"Most...

...at <http://www.acquion.com>. In BASE (buyer and seller exchange), companies provide Acquion with **catalogs**, **product** information, and advertisements. For a fee, Acquion posts them on a Web site for registered ...

...market.

Large buying clients, however, "are not going to purchase from public

catalogs at list **prices** , because they have **negotiated pricing** agreements that are much more favorable," says Aquion President Carl Falk. To accommodate this buying segment, Aquion developed Global Electronic Trading Services, which creates a **customized catalog** of all the suppliers to an individual client, based on the buyer's part numbers, part descriptions, and **negotiated prices** . This catalog is interfaced directly to the front end of the buying client's purchasing...

...update tool applied at the Aquion database, while Aquion provides formatting and structure of the **customized catalog** so it is consistent and easy to search by the buying client. As he browses, the **buyer fills** up an **electronic shopping cart** , and the system creates a purchase order that flows to suppliers.

Other broadbased procurement services...

**ENSEMBLE D'INTERFACES COHERENT DERIVE D'UN MODELE D'OBJETS COMMERCIAUX**

Patent Applicant/Inventor:

SEUBERT Michael, Vogelsangstr. 10, 74889 Sinsheim, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
ADELMANN Stefan, Tannhaeuserring 104, 68199 Mannheim, DE, DE (Residence),  
DE (Nationality), (Designated for all)  
ALVAREZ Gabriel, Heinrich-Boell-Strasse 23, 68766 Hockenheim, DE, DE  
(Residence), US (Nationality), (Designated for all)  
BIEHLER Markus, Am Schloessel 1, 76829 Landau, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
BOCK Daniel, Fritz-Frey-Str. 5, 69121 Heidelberg, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
BOLD Andreas, Hartmannstr. 28, 67063 Ludwigshafen, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
BROSSLER Andreas, Am Schoepfspfad 4, 69251 Gaiberg, DE, DE (Residence),  
DE (Nationality), (Designated for all)  
BUCHMANN Daniel, Reetzstr. 19, 76327 Pfinztal, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
COLLE Renzo, Oppelner Str. 2, 76437 Rastatt, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
DOERNER Robert, Dieselstr. 1, 63071 Offenbach, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
ELFNER Stefan, Amselgasse 6, 69121 Heidelberg, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
FRANKE Stefan, Delmer Bogen 24a, 21614 Buxtehude, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
GEISER Harald, Ladenburger Str. 7, 68723 Plankstadt, DE, DE (Residence),  
DE (Nationality), (Designated for all)  
GOLL Michael, Burgstr. 49, 69121 Heidelberg, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
GNAN Werner, Industriestrasse 7, 74918 Angelbachtal, DE, DE (Residence),  
DE (Nationality), (Designated for all)  
GROSS Antonia, Leipziger Str. 1, 69181 Leimen, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
GROSS Patrick, Steinmetzweg 34, 64625 Bensheim, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
GSCHWENDER Gerhard, BrookeFields, Kundanahalli, 56037 Bangalore, DE, DE  
(Residence), DE (Nationality), (Designated for all)  
HENDRICKS Joerg, 111 Duke Street, Montreal, Quebec QCH3C 2 M1, CA, CA  
(Residence), DE (Nationality), (Designated for all)  
HENGEVOSS Wolf, Alte Heerstr. 1, 69168 Wiesloch, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
HETZER Stephan, Wiesenweg 13, 74918 Angelbachtal, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
HOFMANN Christine, Schlehdornweg 51, 69469 Weinheim, DE, DE (Residence),  
DE (Nationality), (Designated for all)  
JAECK Volker, Hinter der Muehle 31, 69226 Nussloch, DE, DE (Residence),  
DE (Nationality), (Designated for all)  
KELNBERGER Bernhard, Burgunderweg 2, 69231 Rauenberg, DE, DE (Residence),  
DE (Nationality), (Designated for all)  
KEMMER Johann, Schillerstr. 24, 69242 Muehlhausen, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
KIWON Adam, Gehaegestr. 20C, 69190 Hannover, DE, DE (Residence), DE  
(Nationality), (Designated for all)  
KOETTER Karsten, Heinrich-Fuchs-Str. 36, 69126 Heidelberg, DE, DE

(Residence), DE (Nationality), (Designated for all)  
 KRAEHMER Thilo, Friedrich-Ebert-Anlage 41, 69117 Heidelberg, DE, DE  
 (Residence), DE (Nationality), (Designated for all)  
 KUEHL Axel, Kurpfalzstr. 58, 69226 Nussloch, DE, DE (Residence), DE  
 (Nationality), (Designated for all)  
 KUSTER Corinne, Rettigheimer Str. 32, 69242 Muehlhausen/Kraichgau, DE, DE  
 (Residence), DE (Nationality), (Designated for all)  
 LEHNER Christoph, Hildastr. 9, 69115 Heidelberg, DE, DE (Residence), DE  
 (Nationality), (Designated for all)  
 LIEBOLD Werner, Haselweg 2/2, 69168 Wiesloch, DE, DE (Residence), DE  
 (Nationality), (Designated for all)

Detailed Description

#### Detailed Description

... of the invention. A particular exhibitor in the position of a merchant  
may have a **product catalog** 23 1 0. The **product catalog** may  
interact with buyer group data for **negotiated pricing** functionality  
2320 and product and order policies 2330 which may be defined by the  
merchant. **Product catalog** 23 1 0 also interacts with shopping cart  
functionality 2340 which in turn may cooperate...functionality 28 and  
external systems interface functionality 3 0 as shown in Fig. 1. The  
**product catalog** 23 1 0 may be accessed by locator functionality 20.  
Shopping cart functionality 2340 interacts...
